

Extend the life of your HVAC equipment with the most advanced protective coatings applied by Hawaii's best coating contractor.

Hawaii's exclusive MicroGuard coatings applicator provides advanced protection for your HVAC equipment!

Stop using coatings that ONLY protect against corrosion!

Stop applying thick coatings that impede heat transfer and make your equipment work harder!

Stop using organic coatings that feed mold and degrade your indoor air quality!

## There IS a Better Way

Introducing Adsil's next generation HVAC/R coating - MicroGuard1-3500. MG1-3500 is among the most advanced protective coating available. Proven to positively arrest corrosion, protect against chemical and environmental assault, extend the life of equipment, save energy and mitigate microbial growth providing sustainable results with a verifiable ROI.

# **Know Your Coating Chemistry**

#### **Preserve**

MicroGuard1-3500 is an inorganic cross link cured glass-like film that chemically bonds to non-ferrous metal ensuring maximum adhesion and protection in the harshest environments. At 6-8 microns thick, the coating preserves your HVAC/R system's original performance without affecting heat transfer or laminar air flow.

### **Prolong**

MG1-3500 can prolong your HVAC/R system beyond its normal engineered life expectancy, extending the replacement cycle and capital budget outlay. Deferred capital expenses and provided energy savings drop directly to the bottom line.

#### **Protect**

MG1-3500 offers superior corrosion protection, but it doesn't stop there! MG1-3500's advanced formula protects against pollution and chemical assault other coatings can't, cannot oxidize, will not support mold growth improving indoor air quality. Its hydrophobic properties repel debris, reduce maintenance and save energy protecting your assets and your bottom line.

Chemistry is the key to a coating's performance. MG1-3500 has a proprietary inorganic, siloxane-based formula. Many times stronger and thinner than traditional organic coatings, it provides superior protection from the harshest environments, has no impact on heat transfer, can coat microchannels and retains a longlasting barrier that protects HVAC coils against corrosion for an extended period of time (typically 5 years or more). Unlike its organic counterparts, MG1-3500 coating cannot be degraded by heat, light or oxygen (photo-oxidation) or feed mold because of its chemical make-up.

COATING COMPARISON	MicroGuard1-3500 HVAC/R	Traditional HVAC Coating
Coating Chemistry	in-Organic	Organic
Bond Strength	193.5 (33% Stronger)	145
Degraded by Heat, Light or Oxygen	No	Yes
Mold/Fungal Food Source	No	Yes
Dry Film Thickness (Microns)	6-8 Microns	25-75 Microns
Impedes Air Flow, Heat Transfer	No	Yes
Pencil Hardness	9H	HB-5H
ASTM G21 Rating	Rated 0 - No Growth	Pass* or Not Tested
Flexibility	180 Degrees	1/8" or less

\*ASTM G21 Does not outline pass/fail criteria

# Save \$\$\$\$ by extending the life of your HVAC equipment and improving it's efficiency

Ask us how G P Maintenance Solutions and MicroGuard1 3500 can protect your HVAC equipment against corrosion, mold growth, chemicals, heat, UV light, pollution and more... extending the life of your HVAC equipment, improving indoor air quality and saving energy, translating directly to a positive ROI.

# **FEATURES & BENEFITS**

#### **LOW VOC Product**

Environmentally friendly formula with "0" Global Warming Potential value after cure

#### **Extreme Corrosion Protection**

ISO 16773 EIS tested to be significantly more resistant to ion migration than previous formula to positively arrest corrosion

#### **Unmatched Chemical, UV and Pollution Protection**

Proven to withstand the harshest environments

9H Pencil Hardness for Superior Durability

#### **Mitigates Fungal and Microbial Growth**

Inorganic formula cannot feed microbes resulting in reduced maintenance costs and better indoor air quality

#### **Covalently Bonds with 5-B Adhesion**

Strongest adhesion available to aluminum, copper and stainless; and will not delaminate, peel or crack

#### **Microscopically Thin**

No air flow reduction or heat transfer degradation after coating for better efficiency and energy savings; protects both round tube and microchannel coil designs

#### **UV Stable**

Will not photo-oxidize, yellow or flake

#### **Hydrophobic**

Coils are easier to clean, stay cleaner longer and green cleaners can be effectively used

#### Sustainable with Verifiable ROI

Lowers maintenance costs, lowers life-cycle costs and extends service life of equipment

#### **Coats Compressors, Evaporator Coils and Painted Surfaces**

#### **REACH Exempt and RoHS Compliant**

Complies with EU regulations

#### **LEED Points Available**

Building certification rewards sustainable and environmentally friendly decisions and can qualify to obtain state and local government incentives

#### **Installation by G P Maintenance Solutions**

Professional installation in a controlled environment

#### **G P Maintenance Solutions is Hawaii's Premier Coatings Company**

We have been helping Hawaii companies protect their assets since 2002. Utilize our extensive professional experience to help you preserve, prolong and protect your expensive HVAC equipment. We have factory trained application technicians who continually work with Adsil to provide you the highest level of expertise. We are locally owned and operated in Hawaii, so our knowledge of Hawaii's tropical climate conditions ensures a reliable installation.

#### **Controlled Environment**

Our certified technicians will dismantle the units at our facility in a controlled environment. Once the coatings are applied and cured, the units will be reassembled and packed for delivery.

#### **FULLY TESTED AND PROVEN**

#### Rigorous in house and independent testing includes:

- ASTM G-21 Anti-Fungal and Anti-Microbial (Rated "0" Growth)
- ISO 16773 EIS Barrier Corrosion/Chemical Resistance (Significantly More Resistant to Ion Migration Than AD35)
- ASTM D4060 Taber Abrasion
- ASTM D3363 Pencil Hardness (9H)
- ASTM D3359 Cross Hatch Adhesion to Metals (5B on Aluminum, 5B on Copper, 5B on Stainless)
- ASTM B117 Salt Spray Barrier (11,100 hours)
- UV Chamber

Preserve, prolong and protect your most valuable assets, and your bottom line, with MicroGuard1 and G P Maintenance Solutions!
