

## MICROGRIP™ ANTI-SKID SYSTEM EXTREME PERFORMANCE TREATMENT

The MicroGrip Anti-Skid Floor System is designed to reduce the potential for slipping hazards in:

- Commercial kitchens
- Food service lines
- Automotive repair bays
- Handicap ramps
- Public walkways & stairs
- And many more places

**MicroGrip** outlasts other anti-skid floor systems, is competitively priced and delivers superior performance on many rigid floor surfaces in commercial, industrial or municipal environments.

**MicroGrip Anti-Skid System**, delivers increased traction, chemical and abrasion resistance properties to ridged hard tile, terrazzo and quarry tile floors. The MicroGrip system is designed to absorb foot pressure without dislodging. This system will not support mold growth and is easier to maintain. Because the system is clear, it preserves floor color without sacrificing traction properties.

Adsil's patented clear siloxane treatments extend the performance life of the surface. This anti-skid system is easy to install and accommodates busy operating or construction schedules.

- Reduces slip & fall risks
- Excellent abrasion resistance
- Easier to clean & maintain
- NFSC approved
- Preserves floor color
- Highly resistant to chemicals
- Impervious to standing water
- Absorbs foot pressure without dislodging

Preserve, prolong and protect your most valuable assets, and your bottom line, with MicroGuard.
