## Anti-Graffiti & Paint Restoration Extreme Performance Treatment

MicroGuard<sup>®</sup> AD00 Anti-Graffiti Clear Surface Treatment provides a non-sacrificial barrier of protection for many bare or previously painted surfaces where graffiti tagging is a problem. The hydro-phobic, naturally repelling properties of this inorganic clear treatment prevents graffiti from attaching firmly to the surface, thus, graffiti becomes easier to remove. Aerosol paint, permanent marker, ink, etc; can be removed using commercial graffiti removers without damaging the clear treatment.

MicroGuard<sup>®</sup> AD00 is also an ideal clear treatment for rejuvenating oxidized and faded paint finishes. OEM powder coated metal siding or roofing panels, metal doors, signs, etc; can be restored to like new appearance and protected from further deterioration for years to come. This clear treatment is non-yellowing, UV and acid rain resistant.

MicroGuard<sup>®</sup> AD703 Concrete Clear Gloss Treatment is ideal for clear coating many organic floor paints where additional abrasion and chemical resistance is needed.

### Primary benefits include:

- Surfaces are protected from graffiti tagging
- Graffiti mitigation costs are significantly lowered
- Treatment remains crystal clear; non-yellowing
- Brightens & rejuvenates faded paint
- Extends the useful life of many painted surfaces
